
Tangent NET-200 internet radio/mediaplayer

TANGENT NET-200 – CONVEYING THE MUSIC OF TOMORROW!

Tangent NET-200 is born to deliver the music of tomorrow, and tomorrow is just around the corner! More and more music is carried by the Internet, either as electronic files or streamed broadcasts.

With the Tangent NET-200, the listener can enjoy more than 13,000 Internet radio stations from all over the world. He or she can also listen to local FM or Digital Audio Broadcasting (DAB) stations, and even access music on the web, stored on his or her computer, or a mp3 player.

FIRST-CLASS TECHNOLOGY
Just like the successful Tangent Quattro internet radio, the NET-200 also utilises Reciva technology. Among the new features is the ability to draw digital music via a USB connection directly memory card or mp3 player. This makes it possible to maintain the original CD-quality.

Tangent NET-200 uses an excellent digital-analogue converter, which ensures an improved sound quality compared to the one the most users of digital music players are accustomed. A digital output is also provided for hi-fi enthusiasts who wish to use their own D/A converter.

CONNECTS TO YOUR HI-FI SYSTEM AS WELL
Tangent NET-200 can connect to the Internet or internal network either through a network cable or via wireless connection.
The radio's software can be updated over the Internet as well, making it ready for the future already now.

The radio's size and design naturally matches perfectly with the Tangent Hi-Fi 200 system. It can naturally be used with other 45 cm Hi-Fi systems without difficulty. Remote control operation is possible through the accompanying remote control.

Features

Features:
- Wireless internet radio
- Worldwide live streaming radio
- Listen to on-demand content
- Listen to music streaming from your PC
- Requires broadband internet connection
- FM tuner with RDS
- DAB tuner (DAB+ Ready)
